To: Talent Acquisition & Hiring Team
Company: PwC Acceleration Center India
Practice: Financial Services Advisory & Data Platform Practice
Location: Bengaluru East, Karnataka

Date: October 12, 2026
Requisition ID: 4467378631
Candidate Status: Immediate Joiner (30 Days)

> **APPLICATION: FS - Data Engineer - Associate (Req: 4467378631) - Dedeepya Majety (3.9 YOE, Databricks Certified)**

Dear Hiring Manager and PwC Data Platform Leadership,

I am writing to express my high-conviction interest in the **FS - Data Engineer - Associate** position (Req: 4467378631) with PwC Acceleration Center India. I bring **3.9 years of enterprise data engineering experience** at Cognizant Technology Solutions, specializing in building, optimizing, and modernizing cloud data platforms on **Microsoft Azure Databricks**, **PySpark**, and **Delta Lake**. I hold verified credentials as a **Databricks Certified Data Engineer Associate** and **Microsoft Power BI Data Analyst Associate (PL-300)**.

Under 'What Sets You Apart', your requisition highlights hands-on experience with Databricks workflows, Delta Lake, and Unity Catalog. I have directly architected multi-hop Medallion Lakehouses (Bronze, Silver, Gold), authored modular Apache Airflow DAGs with 99.8% SLA uptime, and configured Unity Catalog for fine-grained table and column-level RBAC. Entering at the top of the Associate band (3.9 YOE), I will accelerate your financial analytics deliverables with zero onboarding drag.

Core Production Levers & Verified Accomplishments:

- **40% Pipeline Runtime Reduction:** Successfully modernized 40+ legacy Informatica PowerCenter workflows to Azure Databricks Delta Lake and PySpark, reducing cloud compute infrastructure spend by ~30% with 100% verified data parity.
- **Medallion Lakehouse Engineering:** Architected automated Bronze (Auto Loader `cloudFiles`), Silver (cleaned and deduplicated via PySpark window functions), and Gold (curated star-schema data marts) data pipelines.
- **99.8% Pipeline SLA Reliability:** Authored modular, production-grade Apache Airflow Python DAGs with automated exponential-backoff retries, error isolation, and operational alerting across ADLS Gen2.
- **Enterprise Data Governance & MDM:** Enforced Databricks Unity Catalog for centralized table- and column-level RBAC and tuned Informatica MDM match-merge trust scores, eliminating ~15% duplicate entities across master records.
- **Operational BI & Query Optimization:** Engineered 6+ executive Power BI dashboards with custom DAX calculations and achieved a 25% query latency reduction through SQL profiling and broadcast join optimization.

A critical operational asset I bring to PwC is my active availability: **I am currently serving my official notice period at Cognizant and am available to join within 30 days**. This eliminates the standard 90-day onboarding lag common in the Indian hiring market, enabling your team to staff and deploy an experienced, certified data engineer immediately against your active project delivery commitments.

I welcome the opportunity to discuss how my lakehouse engineering and data modernization background can drive reliable, high-performance data pipelines for PwC Acceleration Center India. Thank you for your consideration, and I look forward to speaking with you.

Sincerely,

Dedeepya Majety
